

Expand Lens

Lift achievement by expanding the focus of observations to students.

Small group video observation

Smart cover & keyboard compatible

140° pro quality lens and integrated stand

Bringing student engagement into focus

swivl

Expand Lens

The Expand Lens is a 3-in-1 tool designed to take full advantage of Swivl's Multi-Camera technology for individualized classroom observations. This enables teachers to easily review, share and discuss video observations where you can see and hear each student as though you were in class, sitting next to them.

For students: Place an Expand Lens on each table in your classroom and use Swivl's Multi-Camera to capture each student in the classroom. See their level of engagement even when you are with another group, hear their thought process as they work through instructional sides, or use the solution to simply keep your students engaged and on task.

For teachers: Review and share Multi-Camera video observations to find insights that lift the achievement of each student in the class. We believe this video technology could dramatically improve how teachers see and hear each individual student.

Pricing

Expand Lens	SW7010	1 pack - lens, case, stand	\$49
