

Make reflection part of every learning activity, for every student, every day

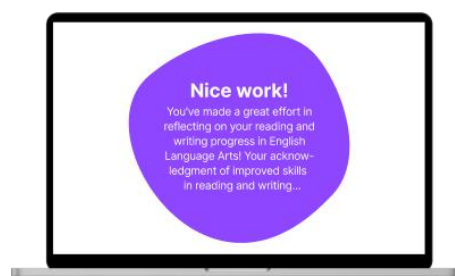

Make math learning relevant

When you set up a reflection based on math learning objectives on MirrorTalk the prompts are automatically generated to help students make connections between math and the world around them. It also encourages them to acquire the reflective skills they need to persevere through challenging math problems.

Improve writing with verbal reflection

The verbal feedback MirrorTalk provides students also helps them improve by conveying a summary of their thoughts in writing, demonstrating to students how to make stronger writing choices on future assignments.

Practice calm and mindfulness

At the end of every reflection, MirrorTalk offers students a Recharge exercise: a brain break that calms or energizes depending on what the student needs.

Keeping hands on hands-on projects

During projects and collaborative work time, M2 is your students' guide on the side. Organize students into small groups and set up interactive tools guided by M2's [Workspace](#).
