

How a teacher transformed her classroom through reflection

"MirrorTalk opened my eyes to students who I thought were keeping up but weren't," says Laura Vargas-Charo, a 2nd grade teacher at Freer ISD in Texas. "After three months of students regularly reflecting, and me making minor adjustments, **88% of my kids moved up** to the next category in their standardized assessments!"

The journey to success

Laura implemented MirrorTalk, an AI reflection tool, with her second graders for three months. Her approach was simple but effective:

- Students completed regular reflections about their learning
- Laura reviewed the AI-generated Group Lesson insights
- She made targeted adjustments to support struggling students
- Within three months, her class showed a 15% improvement in test scores

About MirrorTalk

MirrorTalk guides students through verbal reflections while providing teachers with actionable insights. The AI-powered platform:

- ✓ Assesses prior knowledge to identify gaps
- ✓ Monitors real-time understanding during lessons
- ✓ Verifies mastery through natural dialogue-based assessment
