M2

Feedback request suggestions for ELL teaching environments

With M2, you can get actionable feedback on how you support your ELL students in real time. Review your lessons and see exactly where to adjust strategies to boost student growth.

1 I would like feedback on how well I scaffold content to support ELL students at different proficiency levels.

2 I would like feedback on how effectively I engage ELL students in classroom discussions.

3 I would like feedback on how effectively I provide sentence frames or language supports for ELL learners.

4 I would like feedback on how well I differentiate tasks to meet the language needs of ELL students.

5 I would like feedback on whether I provide clear instructions for both content and language objectives.

6 I would like feedback on how effectively I check for ELL students' understanding using multiple strategies.

7 I would like feedback on whether I give sufficient wait time for ELL students to process and respond.

8 I would like feedback on how well I incorporate opportunities for ELL students to use academic language.

9 I would like feedback on whether my lesson includes supports for both beginner and advanced ELL students.

10 I would like feedback on how clearly I provide feedback to ELL students during the lesson.

Activity 1

Great job restating math terms like "numerator" and "denominator." Try pairing terms with a visual or gesture to anchor meaning.

When you modeled fraction comparisons, your clear explanation supported comprehension. Consider sentence frames ("The fraction is larger because…") to scaffold student responses.

Excellent use of repetition when reviewing equivalent fractions. Adding a brief student echo ("Say it with me: same value, different form") could reinforce retention.

Your pacing was smooth and patient. Allowing a few extra seconds of wait time after each question will help ELL students process the language and math concept.

You did well checking for understanding by calling on multiple students. Try prompting them to use academic language to strengthen linguistic confidence.
